

SMB Scout

Market-research and list-building tool. Search any local-service or F&B business by category and area, pull ratings, price band, phone, website presence, reviews, photos, and mined insights. Forked from F&B Scout v2 (2026-07) and generalized for US SMB verticals (HVAC, plumbing, roofing, dental, med spa, law) alongside the original F&B/Table Foundry use case — same engine, two analysis modes.

Google Places API key (stored only in this browser, never sent anywhere but Google)

Analysis mode

General SMB (HVAC, plumbing, dental, law, etc.) ▼

Currency for price-band display

\$ USD ▼

Vertical / category tag (for exported records)

e.g. hvac, plumbing, dental, law

Analysis mode swaps the review-mining keyword library (food/service themes for F&B vs. service/responsiveness/professionalism themes for general SMB) and turns the catering auto-flag on/off. The vertical tag is written into every exported SMB account record — it does not affect the search itself, only the label attached to results.

What to look for, one or more terms, comma-separated (required)

e.g. HVAC contractor, AC repair company

Areas / cities, one or more, comma-separated (required)

e.g. Austin TX, Tampa FL

Search

Rating band (optional, blank = no limit)

min

to

max

Price level (optional, none checked = all levels)

☐ Inexpensive ☐ Moderate ☐ Expensive ☐ Very expensive

Runs every term x every area, then dedupes into one list. Each combination pulls up to 60 venues (Google's own hard cap per query, 3 pages of 20). If an area needs more than that for one term, split it into more specific terms or sub-areas/neighbourhoods and run them as separate comma-separated entries.

Auto-flag as chain if name contains (comma-separated, case-insensitive). Flagged accounts are tiered as skip and left unticked, but still shown, not deleted.

e.g. ServiceMaster, Roto-Rooter, Mr. Rooter, national franchise brands
